Application No.: 09/986,190

IV. AMENDMENTS TO THE CLAIMS

1. - 3. (CANCELED).

- (CURRENTLY AMENDED) The A method for building the 4. overhead infrastructure according to any one of claims 1 to 3 comprising a step of drawing a tensile line between utility poles, a step of putting around the tensile line a plastically deformable coil having a metal wire formed in a spiral shape and synthetic resin coated on a surface of the metal wire, a step of elongating the coil until its plastic deformation so as to form a basic construction with a series of overhead cableway capable of holding a plurality of overhead lines inside the spiral of the coil, and a step of extending an overhead line in an empty space of the overhead cableway on demand, wherein a plurality of overhead lines, respectively managed by each of a plurality of business conductors, are accommodated in the overhead cableway wherein a plurality of overhead lines, respectively managed by each of a plurality of business conductors, are accommodated in the overhead cableway, and an administrator provides the business conductors with rights for using the overhead cableway for rent or for sale with a fee according to a number and weight of the overhead lines managed by each of the business conductors, and wherein for the installation of the basic construction, tensile strength of the tensile line is set based on the maximum load estimated from an amount of the overhead lines possibly inserted in the overhead cableway.
- 5. (CURRENTLY AMENDED) The method for building the overhead infrastructure according to any one of claims 1 to 3 claim 4, wherein for the installation of the basic construction, a size of the overhead cableway is set based on an estimated demand for the overhead lines.
- 6. (CURRENTLY AMENDED) The method for building the overhead infrastructure according to any one of claims 1 to 3 claim 4, wherein distribution of the overhead lines is carried out through gaps of the coil between the utility poles.

Application No.: 09/986,190

7. (NEW) A method for managing an overhead infrastructure having a tensile line between utility poles and a plastically deformable coil elongated along the tensile line so as to form a series of overhead cableways capable of holding a plurality of overhead lines, the method comprising:

a step of extending an overhead line in an empty space of the overhead cableway on demand.

8. (NEW) A method for managing an overhead infrastructure having a tensile line between utility poles and a plastically deformable coil elongated along the tensile line so as to form a series of overhead cableways capable of holding a plurality of overhead lines, the method comprising:

a step of extending overhead lines in an empty space of the overhead cableway on demand, the overhead lines respectively being used by each of business conductors.

9. (NEW) The method for managing an overhead infrastructure according to claim 8, further comprising:

a step of providing the business conductors with rights for using the overhead cableway for rent or for sale with a fee according to number and weight of the overhead lines used by each of business conductors.

- 10. (NEW) The method for managing the overhead infrastructure according to any one of claims 7 to 9, wherein for the installation of the basic construction, tensile strength of the tensile line is set based on the maximum load estimated from an amount of the overhead lines possibly inserted in the overhead cableway.
- 11. (NEW) The method for managing the overhead infrastructure according to any one of claims 7 to 9, wherein for the installation of the basic construction, a size of the overhead cableway is set based on an estimated demand for the overhead lines.

Application No.: 09/986,190

12. (NEW) The method for managing the overhead infrastructure according to any one of claims 7 to 9, wherein distribution of the overhead lines is carried out through gaps of the coil between the utility poles.
